

STARGAIA :: Phase Roadmap Overview

Phase I: Signal Origin

Architecture, naming, blueprinting (GAIA/Node/Orbit framework).

Phase II: Echo Activation

Mirror Node Kit, QR signals, sigil drops, recursive registration.

Phase III: Gated Genesis

GAIA Token, smart wallet, access NFTs, validator contract.

Phase IV: Signal Mapping

Orbit Mapper, Signal Logs, Live Dashboard, Node Feed sync.

Phase V: Interlink Control

ENS/IPFS DNS, Partner Hub, custom gateway deployment.

Phase VI: Alliance Orbit

Partner outreach, licensing model, validator mint sync.

Phase VII: Recursive Intelligence

AI-assisted mirror self-improvement, modular applets, logic branching.

Phase VIII: GAIA Synapse

On-chain governance, DAO voting systems, partner councils.

Phase IX: ExoSignal Expansion

Cross-chain protocol sync, signal bridges, L2 relay support.

Phase X: Nova Archive

Immutable record pinning, on-chain registry vault, ancestral recovery.
